

Interview Evaluation Report

Date: 14 June 2026

Interviewer: Manas Mishra

Evaluation Criteria

Each question was evaluated on a scale of **0 to 5**:

- **5** – Excellent
- **4** – Good
- **3** – Satisfactory
- **2** – Average
- **1** – Poor
- **0** – Not Acceptable

Candidate: Ayush Sengar

Question	Topic	Score
1	Why are we using TypeScript and not JavaScript?	1
2	Explain the logic of the given code	0
3	What did you do in the last few days?	0
4	Find the error in the given TypeScript code	0
5	Find the error in the given Express/TypeScript code	0
6	What is the difference between TypeScript and JavaScript?	2
7	How would you design an API?	0

Question 2 – Explain the Logic of the Given Code

```
function printDiamond(size: number): void {  
  for (let i = 1; i <= size; i++) {  
    let spaces = " ".repeat(size - i);  
    let stars = "*".repeat(2 * i - 1);  
    console.log(spaces + stars);  
  }  
}
```

```

    for (let i = size - 1; i >= 1; i--) {
      let spaces = " ".repeat(size - i);
      let stars = "*".repeat(2 * i - 1);
      console.log(spaces + stars);
    }
  }

  printDiamond(5);

```

Expected Understanding:

- The first loop prints the upper half of the diamond.
- The second loop prints the lower half of the diamond.
- Spaces are used for alignment.
- Stars are calculated using `(2 * i - 1)` to maintain the diamond shape.

Result: Candidate was unable to explain the logic and workflow of the program.

Score: 0

Question 4 – Find the Error in the Given Code

```

interface User {
  id: number;
  name: string;
}

const createUser = (id: number, name: string): User => { id, name };

```

Expected Answer: The arrow function body is using curly braces without returning an object. It should either use an explicit return statement or wrap the object in parentheses.

Example:

```

const createUser = (id: number, name: string): User => ({
  id,
  name
});

```

Result: Candidate was unable to identify the error.

Score: 0

Question 5 – Find the Error in the Given Express/TypeScript Code

```
import express, { Request, Response } from 'express';

const app = express();
const PORT = 3000;

let totalRequests: number = 0;
totalRequests = "one";

app.get('/health', (req: Request, res: Response) => {
  res.json({ status: "OK", requests: totalRequests });
});

app.get('/error-route', (req: Request, res: Response) => {
  let userData: any = undefined;

  const nameInCaps = userData.name.toUpperCase();

  res.json({ message: `Hello, ${nameInCaps}` });
});

app.listen(PORT, () => {
  console.log(`Server is running on http://localhost:${PORT}`);
});
```

Expected Errors:

1. Type mismatch:

```
let totalRequests: number = 0;
totalRequests = "one";
```

A string value is being assigned to a variable declared as a number.

1. Runtime error:

```
let userData: any = undefined;
const nameInCaps = userData.name.toUpperCase();
```

Attempting to access the `name` property of `undefined` will cause a runtime exception.

Result: Candidate was unable to identify the errors.

Score: 0

Overall Assessment

Ayush demonstrated a very limited understanding of the concepts required for the project. He was unable to explain the logic of a basic programming problem, identify errors in TypeScript code samples, or describe an approach for API design. His responses indicated a lack of practical exposure to TypeScript and backend development fundamentals.

When asked what he had done over the past few days to prepare for the project, he stated that he had only read articles from roadmap.sh and had not written or practiced any code. Given that project development was scheduled to begin the following day, this level of preparation raises concerns regarding readiness and commitment.

Attendance and Professional Conduct

Ayush joined the interview while he was in the market and was accompanied by a friend. During an earlier conversation regarding his absence from the scheduled meeting, he had stated that he was in the market with his mother and would be late.

Conducting an interview from a public environment significantly affected the professionalism of the discussion and reflected a lack of preparation for an important evaluation. Team members are expected to attend scheduled interviews from a suitable environment and communicate availability accurately.

Remarks

Based on the interview, there are significant gaps in both technical preparedness and project readiness. The candidate was unable to demonstrate the minimum level of understanding expected for the role and did not provide evidence of practical learning or coding efforts despite prior notice and preparation time.

Overall Performance: Not Acceptable

Recommendation: Not recommended for onboarding to the team at this stage. Consideration for future participation should be based on demonstrated improvement in technical fundamentals, practical coding ability, and professional commitment.

Lead Maintainer's Assessment

Based on the technical evaluation, preparation level, and overall interview performance, my assessment as the Lead Maintainer is that the candidate is currently not fit for the team.

The final onboarding decision remains with the founders; however, based on the evidence gathered during the interview, I do not recommend proceeding with onboarding at this time.

Lead Maintainer Recommendation: Not Fit for the Team

Final Decision Authority: Founders
